

Daily Briefing Scheduler — Milo

Overview

Every morning at a configured time (default **7:00 AM tenant local time**), Milo automatically composes and sends a structured daily briefing to the tenant's primary email address.

What It Does

1. Reads unread emails
2. Reads today's + next 7 days calendar
3. Reads open work items (risks, overdue tasks, upcoming milestones)
4. Evaluates all trigger rules
5. Composes a structured briefing
6. Sends it via email to the tenant's primary address

Briefing Format

```
Good morning [Name],

📧 INBOX — X unread emails
• [Sender]: [Subject] — [1-line summary]

📅 TODAY — [Day, Date]
• [Time] — [Event Title] ([Meeting link if present])

📅 THIS WEEK
• [Date] — [Event Title]

⚠️ RISKS & BLOCKERS
• [Work item] — [Risk/issue summary]

✅ APPROVALS PENDING — X items
• [Item] — [Approve link]

🗒️ UPCOMING MILESTONES
• [Milestone] — due [Date] — [Status]

— Milo
```

Configuration (Per Tenant)

- **Send time** — configurable, default 07:00
- **Timezone** — pulled from tenant profile
- **Recipient** — tenant primary email
- **Toggle** — on/off per tenant in Settings → Persona

AWS Architecture

- **AWS EventBridge Scheduler** — triggers the job on a cron schedule per tenant timezone
- **AWS Lambda** — handler that runs the Milo briefing job

- **IAM Role** — Lambda execution role with least-privilege permissions
- EventBridge handles all scheduling; no pg_cron or Vercel Cron needed

Flow

```
EventBridge Scheduler → Lambda (runs Milo briefing job) → Nylas email send
```

Stack Notes

- Reuses existing Milo tool chain — no new integrations needed
- Briefing stored in episodic memory after send (kind: `event`)
- Lambda should be idempotent — safe to retry on failure
- Tenant config stored in DB, read at Lambda invocation time
