

Milo UI Redesign — Antigravity Engineering Prompt

Overview

The current Milo UI lacks a logical information hierarchy. Navigation is disconnected from how programs actually work. This redesign reorganizes the entire UI around the 8-layer program hierarchy, making the experience seamless, contextual, and action-oriented.

Core Design Philosophy

The UI should mirror how a program actually works — **top-down, layer by layer**. You start with the big picture and drill down. No jumping between disconnected pages. Every screen should answer: *"What do I need to do right now?"*

Information Architecture

Navigation Structure

Left Sidebar (Primary Nav)

- Persistent, always visible on desktop
- Collapsible to icon-only on mobile
- Items: Home, Chat, Programs, Approvals, Inbox, Settings
- Approvals item shows live badge count for pending items
- Active program name displayed below logo

Top Bar

- **Left:** Breadcrumb trail (e.g. Programs → Alpha Initiative → Project X → Milestone 3)
- **Center:** Global search (cmd+K) — searches work items, emails, decisions
- **Right:** Notifications bell + user avatar

Right Rail — Milo Chat

- Collapsible panel, default **open** on desktop
- Collapsed to icon on mobile, expands as overlay
- Always context-aware of the current page/work item being viewed
- Example: viewing a Milestone → ask "what's blocking this?" → Milo responds with full context

Page Specifications

1. Home Dashboard

Purpose: Command center. Every element is actionable.

Sections:

- **Program Health** — status ring per active program (On Track / At Risk / Off Track)
- **Open Approvals** — top 3 pending, inline approve/reject buttons
- **Upcoming Milestones** — next 14 days, sorted by due date, owner shown
- **Milo Activity Feed** — last 10 autonomous actions taken (emails sent, items updated, risks flagged)
- **Quick Actions Bar** — "New Task", "Log Decision", "Flag Risk", "Ask Milo"

2. Chat

Purpose: Primary interaction surface with Milo.

Behavior:

- Full-page chat when navigated to directly
- Condensed right-rail version available on all other pages
- Message history persisted per session and searchable
- Milo responses include inline action buttons (e.g. "Create Task", "Send Email", "View Item")
- Context pill shown at top: "Milo is aware of: [Program Name] · [Current Page]"

3. Programs — 8-Layer Drill-Down

Purpose: Navigate the full program hierarchy seamlessly.

Behavior:

- Opens at **Objective level** — shows all objectives as cards
- Each layer expands **inline** (Linear-style) — no full page reloads
- Breadcrumb updates as you drill down
- Each work item card shows: name, status badge, owner avatar, due date, % complete
- Clicking a card expands it to show children + a detail panel on the right
- Detail panel shows: description, metadata, risks, decisions, linked change requests, activity log
- **Risks, Decisions, Change Requests** accessible as tabs within each program view

Layer Order:

1. Objective
2. Outcome
3. Key Result
4. Initiative
5. Project
6. Workstream
7. Milestone
8. Task

4. Approvals Queue

Purpose: First-class decision management.

Tabs: Pending · Approved · Rejected · Delegated

Pending Card contains:

- Request title + description
- Requested by + timestamp
- Deadline (with urgency color: green/amber/red)
- **Inline action buttons:** Approve · Reject · Delegate · Defer
- Expandable detail section for full context

Mobile behavior:

- Full approval flow works on mobile
- Swipe right = Approve, swipe left = Reject (with confirmation)
- Email reply fallback: **APPROVE** or **REJECT** in reply body still works

5. Inbox

Purpose: Unified communication layer.

Tabs: Emails · Meeting Notes

Email view:

- Unread count badge
- Thread view with Milo's suggested reply pre-drafted
- One-click send or edit before sending
- "Create Work Item from Email" action on each thread

Meeting Notes view:

- Auto-populated from Milo Notetaker bot
- Each note shows: meeting title, date, attendees, transcript summary, action items extracted
- Action items linkable directly to work items

6. Settings

Sections:

- **Integrations:** Nylas (email/calendar), GitHub, Slack — connect/disconnect, status indicator
 - **Persona:** AI behavior tuning — tone, verbosity, escalation thresholds
 - **Billing:** Plan, usage, invoices
-

Key UX Principles

Seamless Layer Navigation

- No dead ends. Every page has a path forward and a path back.
- Breadcrumb always visible and clickable.
- ESC key collapses current drill-down level.

Actionable Everything

- No read-only dashboards. Every data point has an action attached.
- Status badges are clickable — click "At Risk" to see why and what to do.

Milo Always Present

- Right rail chat available on every page.
- Milo proactively surfaces relevant context based on current view.
- Milo's last action always visible in the top bar notification area.

Approvals as First-Class Citizen

- Badge count always visible in nav.
- Approvals never buried in a submenu.
- One-click decisions — no modal hell, no confirmation pages.

Mobile-First Approvals

- Approval queue is the primary mobile use case.
 - All other pages gracefully responsive but approvals are pixel-perfect on mobile.
-

Component Library & Stack

Layer	Technology
Framework	Next.js 15 (App Router)
Components	shadcn/ui
Styling	Tailwind CSS v4
Animations	Framer Motion
State Management	Zustand

Icons	Lucide React
Charts	Recharts

Acceptance Criteria

1. Left sidebar nav with 6 items: Home, Chat, Programs, Approvals, Inbox, Settings
 2. Approvals badge count updates in real-time
 3. Programs page renders 8-layer hierarchy with inline expand (no page reload per layer)
 4. Breadcrumb updates correctly at every drill-down level
 5. Right-rail Milo chat is present and collapsible on all pages
 6. Right-rail chat displays current page context pill
 7. Home dashboard renders: program health, open approvals, upcoming milestones, activity feed
 8. Approvals queue supports inline approve/reject/delegate/defer without modal navigation
 9. Mobile approval flow works with swipe gestures + email reply fallback
 10. Inbox shows email threads with pre-drafted Milo replies
 11. Meeting notes tab shows notetaker transcripts with extracted action items
 12. Global search (cmd+K) searches across work items, emails, and decisions
 13. All pages pass Lighthouse accessibility score ≥ 90
 14. All transitions use Framer Motion with $\leq 300\text{ms}$ duration
-

Out of Scope (This Sprint)

- Dark mode (Phase 2)
- Custom dashboard widgets (Phase 2)
- Multi-tenant org switching (Phase 3)
- Mobile native app (Phase 4)
